SUMMARY

Results-oriented Data Analyst with an MSc in Data Science and AI and 3 years of experience at Accenture supporting high-impact Google projects. Skilled in Power BI, SQL, Python, Excel, Tableau, data validation, dashboard development, KPI reporting, root cause analysis and stakeholder communication. Experienced in cleaning and analysing complex datasets, improving data quality, automating manual processes and translating findings into clear insights that support operational decision-making. Strong interest in using data, automation and reporting to improve safety, sustainability, operational efficiency and business performance.

PROFESSIONAL EXPERIENCE

Quality Engineering Analyst

Jan 2021 – Sep 2024

Accenture

Client: Google

- Automated **testing and validation workflows** using **Python and Java**, reducing manual effort by **25%** and accelerating delivery timelines across **Google payment platform projects**.
- Analysed **API migration data** and monitored system performance during large-scale payment platform transitions, ensuring **stable, seamless migrations** with minimal operational disruption.
- Performed **data validation, regression testing, and root-cause analysis** across Payment API rollouts, rapidly identifying defects and safeguarding **system accuracy, reliability, and integrity**.
- Identified and resolved **critical production issues** through detailed log analysis and debugging, improving **platform reliability** and enhancing the overall user experience.
- Collaborated with **cross-functional stakeholders** to investigate production incidents, translating complex technical findings into **actionable reports and client-facing recommendations** that supported informed business decisions.

Retail Assistant

Jul 2025 – Present

Primark

- Supported daily retail operations** by assisting customers, checking stock accuracy, maintaining pricing standards and escalating discrepancies, building practical understanding of store processes and customer experience.
- Collaborated with colleagues in a **fast-paced retail environment**, developing strong communication, attention to detail and operational awareness relevant to retail reporting and business insight.

SKILLS

Data Analytics & BI: Power BI, SQL, Excel, Tableau, Dashboard Development, KPI Reporting, Performance Reporting, Data Visualisation, Self-Service Reporting

Data Management: Data Cleaning, Data Validation, Data Quality Checks, Data Modelling, Large Dataset Analysis, Data Integrity, Reporting Accuracy

Automation & Tools: Python, Pandas, NumPy, Power Query, DAX, Git, GitHub, Power Automate Awareness, Power Apps Awareness, Microsoft Forms Awareness, Copilot Awareness

Analytical Techniques: Exploratory Data Analysis, Trend Analysis, Outlier Detection, Statistical Analysis, Root Cause Analysis, Process Improvement

Business & Operations: Operational Reporting, Stakeholder Reporting, Sustainability Analytics Interest, Risk and Compliance Awareness

Professional: Stakeholder Communication, Cross-Functional Collaboration, Translating Technical Insights, Problem Solving, Attention to Detail

Learning: Currently developing practical knowledge of Power Automate, Power Apps, Microsoft Forms, Copilot, Databricks and Azure data workflows to strengthen reporting automation and scalable data product development.

EDUCATION

University of Liverpool

Master of Science in Data Science and AI

Sept 2024 – Sept 2025

Grade: Merit

NMAM Institute of Technology

Bachelor of Science in Electronics and Communication Engineering

Jun 2016 – Jun 2020

Grade: Distinction

PROJECTS

UK Housing Market Analytics | PostgreSQL, SQL, Power BI | 2026

- Cleaned, transformed and validated **839K+ UK property transaction records** using **PostgreSQL**, ensuring high data quality and creating a reliable foundation for housing market analysis.
- Developed **advanced SQL queries** to analyse regional property prices, transaction volumes, and property type trends, uncovering **actionable insights into affordability gaps and market performance**.
- Built an interactive **Power BI dashboard** visualising over **£295B in property sales**, enabling stakeholders to explore transaction activity, compare regional markets, and identify **high-value investment opportunities**.
- Transformed raw transaction data into clean, structured datasets for **analysis and Power BI reporting**, supporting consistent reporting, trend analysis and data-driven decision making.

Retail Sales Performance Analysis | SQL, Tableau | 2026

- Analysed **retail sales transactions** using **SQL** to uncover key revenue drivers, profitability trends, and performance patterns across product categories.
- Investigated the impact of **discounting strategies on profit margins**, identifying categories where promotional activity contributed to significant **profit erosion** and reduced profitability.
- Developed interactive **Tableau dashboards** to visualise sales performance, customer purchasing behaviour, and category trends, delivering **data-driven recommendations** that informed pricing and promotional decisions.

Customer Churn & Retention Analysis | Python, Machine Learning | 2026

- Analysed **telecom customer data** using **Pandas and NumPy**, performing data cleaning, preprocessing, and feature engineering to identify key drivers of customer churn.
- Developed and optimised **Logistic Regression** and **Random Forest** models to predict churn behaviour, achieving approximately **79% recall** in identifying at-risk customers.
- Generated **interpretable business insights** from model outputs, enabling data-driven retention strategies and improving the organisation's ability to proactively identify potential customer churn.

NewsGlobe360 | Python, React, CesiumJS, NLP | 2025

- Developed a **multilingual news analytics platform**, applying **NLP, sentiment analysis, and machine learning** to process and classify **100–300 news articles**, enabling automated event detection and trend analysis.
- Designed and implemented **REST APIs** with caching and deduplication mechanisms, achieving **sub-2-second response times** for real-time news retrieval and analytics workflows.
- Integrated **text mining and geospatial analytics** into an interactive **CesiumJS-based visualisation platform**, delivering a comprehensive global news exploration experience and enhancing insight discovery across geographic regions.

ACHIEVEMENTS & CERTIFICATIONS

Accenture Extra Mile Award (Individual category) – 2022

Recognised for staying agile and resilient, successfully prioritising critical tasks to drive efficiency and embodying the One Accenture culture.

The Complete SQL Bootcamp – Udemy (2026)

Covered SQL querying, joins, data analysis, and database fundamentals.

Machine Learning A–Z – Udemy (2024)

Covered supervised and unsupervised ML, model evaluation, and deployment.

Diploma in Python – Manipal Institute of Computer Education (2019)

Completed comprehensive training in core Python programming.
